Employment

Senior Software Engineer, Furlenco

April 2015 to present

Furlenco is an e-commerce platform providing high quality furniture experiences on rent.

- Developed internal application for managing customer lifecycle and orders. Made with React and NodeJS, the web app is used by company personnel to handle operations such as customer deliveries, finances etc.
- Developed and maintained *Gringotts*, a payment microservice built on NodeJS. Used by consumer facing web and mobile apps to collect and track payments & subscriptions.
- Developed v1.0 and v2.0 of the consumer web app (www.furlenco.com). Made with Angular and Rails. Also involved in designing the database models for v2.0.

Junior Software Developer, FusionCharts

July 2014 to March 2015

FusionCharts is a data visualization library trusted by clients worldwide to build interactive statistic charts.

- Architected and developed new documentation website (www.fusioncharts.com/dev), powered by Jekyll and JSDoc. Reduced documentation build time from 20 mins to 5 mins. Interface was built as an SPA that increased user engagements and usability.

Internships, Projects & Extra-curricular
